

Full-Stack Web Development

As a full-stack web developer, I specialize in building modern, dynamic, and scalable web applications using the MERN stack (MongoDB, Express.js, React.js, and Node.js).

I manage the complete development lifecycle, starting from planning and design to implementation, testing, and deployment.

On the front end, I focus on creating intuitive and visually appealing user interfaces using React.js, ensuring a seamless and interactive experience. On the back end, I design and implement robust server-side logic with Node.js and Express.js, ensuring optimal application performance. I

integrate APIs to connect front-end and back-end components, ensuring smooth data flow. Additionally, I optimize the

applications for speed, security, and scalability. My development process includes testing to ensure a bug-free experience and deploying applications to cloud platforms like AWS, Heroku, or Netlify.

By delivering end-to-end solutions, I help businesses establish a strong digital presence tailored to their specific needs.
